

This toolbar allows the user to login, open the Contact Us page, access set-up settings, and search the website (using Google Search API)

This is the main menu toolbar. From here the user can navigate to the Home, Observations, About Us and Contact Us pages.

This section of the page shows a dynamic map of the region using the Cesium API. The API allows you to zoom, rotate and timestamp various global positions.

Onto this API are pins, and these pins allow the user to open dynamic content about the pin.

Administrator users are allowed to add new pins. The configuration for each pin is sourced from a JSON file, whose data is updated by a database.

1. Observations

#	Note
1	Click on this icon to sign in as a different user.
2	Click on this icon to display the Contact Us page.
3	Click on this icon to display the configuration page.
4	Enter search text into this field to search for specific text.
5	Click on this pin to display detailed information.
